

ELEVATE
CLEANING SYSTEMS

ELEVATE / ATHENS - ATTICA

A new perspective on exterior cleaning.

Developing drone-assisted solutions for
multi-storey façade cleaning across Attica.

ILLUSTRATIVE CONCEPT / NOT AN ELEVATE PROJECT

As façades rise, conventional access becomes more complex.

For buildings of roughly four or more storeys, exterior maintenance often requires dedicated access equipment, scheduling and site restrictions.

4+ STOREYS

Indicative target profile, not a strict technical limit.

01 / ACCESS

Lifts, scaffolding or work-at-height systems.

02 / OPERATIONS

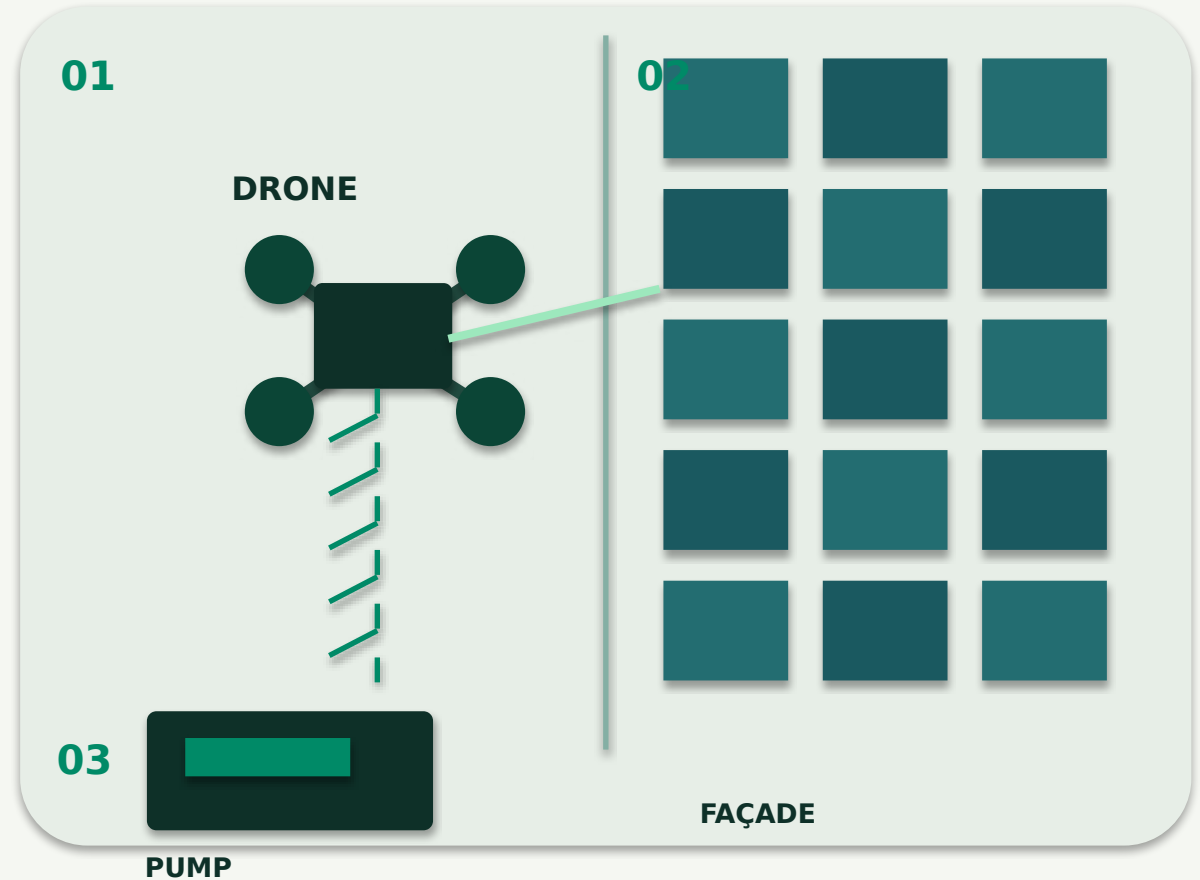

Perimeter management and site scheduling.

An alternative approach to access.

The proposed setup combines a drone, supply hose and ground pump. Suitability must be assessed for each project.

Under assessment; not a verified live fleet or operation.

Designed around the needs of taller properties.

Hotels

Multi-storey glazing and outer façades.

Office towers

Commercial buildings with complex surfaces.

Public assets

Suitable public buildings, subject to approval.

A surface-specific method, not a one-size-fits-all wash.

01 **Curtain-wall glass**

Controlled flow and rinse.

02 **Cladding**

Material compatibility first.

03 **Soft washing**

Where the surface permits.

04 **Maintenance**

Future site-specific schedules.

Feasibility is assessed on site.

Surface

Condition, guidance and test patch.

Airspace

Flight restrictions and authorisations.

Site setup

Water, safety perimeter and weather.

From initial enquiry to documented review.

01

Enquiry

02

Site survey

03

Proposal

04

Approval

05

Review

Any work proceeds only once all necessary requirements are satisfied.

A pilot proposal with measurable criteria.

Selection

Building, façades and access points.

Test

Compatibility, protection and limits.

Assessment

Time, finish, water use and disruption.

Potential value, without unsupported promises.

Access options

Potentially less reliance on heavy access structures.

Site planning

Property-specific operational scheduling.

Evaluation

Evidence from pilots before commitments.

Safety and permissions come before flight.

Permissions

Check HCAA, airspace and UAS requirements.

Insurance

Coverage and operating category must be confirmed.

Site controls

Perimeter, weather and surface suitability.

A new approach built for the Attica market.
